

LOWER KURRAM TEHSIL (KURRAM AGENCY)

IVAP-II SAMPLE DATA – Preliminary

196 IDP families (a total of 1,215 individuals) originating from Lower Kurram tehsil (Kurram Agency) in FATA were randomly selected from the list of 3,835 families identified in IVAP-I. They were surveyed with the IVAP-II multi-cluster questionnaire (which all clusters had previously fed questions into) between February and June 2012. The families were surveyed in their displacement locations across Khyber Paktunkhwa, however the questions related to needs in their origin location. The results are generalized across the tehsil and presented below. All data relates to conditions and needs in origin location and should be used to inform humanitarian assistance provided to these families upon their return to these areas. Further information is available in the database found on the IVAP website (www.ivap.org.pk) or through contacting the IVAP team (irum.jamshed@pakistan.theirc.org).

GENERAL FAMILY INFORMATION

Average family size	5.7
Age breakdown
